Introduction

Built to find and solve RF problems on site!

The SPECTRAN® V6 MIL is a military-grade, portable real-time spectrum analyzer capable of capturing even the shortest signal transmissions. Both its scanning speed and recording time are unmatched: The analyzer scans 6 GHz in less than 5 ms (MIL 2000MA-6 version), making it one of the world's fastest monitoring receivers. At the same time an unlimited recording is reached by clever file writing options such as fifo, as well as several possible storage capacity extensions.

Operation and software

The pre-installed RTSA-Suite PRO software is designed to fully utilize the power of the SPECTRAN® V6 MIL.

Our user-friendly software detects unknown or illegal transmissions across a wide frequency range. The SPECTRAN® V6 MIL can store several hours of real-time recordings and also offers an auto-rotate function for virtually unlimited recording time. Once recorded, the entire measurement data can be converted into the software.

Perfect for signal analysis

Helpful features, such as a 3D spectrogram view displaying the signal in a unique manner, allow for a deep-dive analysis of the real-time measurement or recorded data.

Military grade

Our spectrum analyzer enables you to master any challenge in any conditions. It provides a powerful, extremely impact-resistant outdoor notebook as well as a high-end spectrum analyzer – all packed into one compact device. The V6 MIL has been independently tested in accordance with MIL-STD-810G, MIL-STD-461F, and IP65 certification standards. Rain, snow, ice or sand? No problem for the SPECTRAN® V6 MIL.
